

Assessment 2: Create a form with table layout (25 points)

Due: see course outline for a specific date

In assignment 1, you create a newsletter for a local restaurant called “Joan’s Tacos”. The owners liked your work, and now they have a new project. They want you to create a customer feedback form. Their designer team provide you with this design:

Joan's tacos

Thank you for taking the time to fill our feedback

About your visit

How much did you spend? 10~20 ▾

What was your order?

☒ Taco ☐ Burritos ☐ Quesadillas

how was your experience?

☐ Not bad ☒ Good ☐ Great work

How to get 30% off:

There are many variations of passages of Lorem Ipsum available, but the majority have suffered alteration in some form, by injected humour, or randomised words which don't look even slightly believable.

About you

■ Requirement (Client requirement)

1. You must use **table css layout** (Not the table tag) to code the feedback design. Creating your html layout using <table> tag does not count for this assignment, and your work will be considered as an unacceptable work (Use display css property 'display: table' and other table elements such as rows, cols and cells).
2. All items must be in the same order and have the same style as shown in figure 2.
3. First, last name, Email, and message are **required** fields.
4. All text fields must be validated. Use the pattern attribute and attach these regular expressions to each field:
 - a. First, last name: `[a-zA-Z0-9]+`
 - b. Email: `/^[a-z0-9._%+-]+@[a-z0-9.-]+\.[a-z]{2,4}$/`
 - c. Telephone: `\d{3}[\-]\d{3}[\-]\d{4}`
 - d. Zip Code: `/^[A-Za-z]\d[A-Za-z][-]?[A-Za-z]\d$/`
5. Apply access keys for each label using the first letter from each text field name. For example, for Email, the access key should be the first letter 'E'.
6. Users are only allowed to upload fills type of '.png'.
7. An active or focus text field must sounder with a green border (Tip: use ': focus'). The focus style should be: 1. border color is #0C0. 2. Border size is 1 px. 3. Border style /type is solid.
8. The default value for the 'what was your order?' point to Taco.
9. The default value for the 'How was your experience?' point to Good.
10. Bounce requirement (+3 point):
 - a. Change the 'submit' button when mouse goes over it. To do that, use ':hover' and style the background-color to #4CAF50 and font color to #fff.

- b. Show pop up window with the message "Thanks for your feedback!". Use the 'OnClick' events.
- c. Use label elements to name all form elements. Use <label for=""> to create a label, then attached it to a form element such as input or box list.

■ Design details:

Content	Page or form
Style	- page width is 600px

Content	- logo.png - Thank you for taking the time to fill our feedback
Style	- Color is #ffdf6b
Content	- logo.png - Thank you for taking the time to fill our feedback
Style	- Color is #ffdf6b

Content	How to get 30% off:
Style	- Color is #ffffcc - Tip: width 25%

Content	What was your order?
Style	- Taco - Burritos -Quesadillas - Color is #fff

Content	How was you experience?
Style	- Not Bad - Good - Great - Color is #fff

Content	or active filed style
Style	- Border color is #0C0
: Focus	- Border style is solid - Border size is 1px

Content	First, last name * Email * Telephone Zip code Message * Attach only images
Style	- Font is bold, - Font size is 13px. - '*' color is red

Content	Submit
Style	- Background color is #2196f3 - Color is white or snow :)
Hover style : hover	- Background color is #4caf50

■ Submit (Only submit a single .zip file)

1. Name your folder feedback_project.
2. Right-click on the folder and choose 'Send to' -> 'Compressed (zipped) folder'.
3. Upload the zipped folder to the Assignment 2 Dropbox

■ Instructions (optional)

Besides the instructions steps from assignment 1 (refer to assignment 1 document). I would recommend approaching this project using these steps:

1. First, think of how to fit all the design elements (e.g. checkbox) into table elements (e.g. table-row). You can draw a table over the provided design (I attached a full size of the design at the end of this document). Draw the table header, rows, and cols and defined the sizes of the cols and rows. Feel free to add notes such as display: table, display: table-row, display: table-cell...etc.
2. Now, define elements with similar style and group them under css selectors. Also, define which cells need to be merged.
3. By now, you should be able to position contents on the layout. Create the content to fit its position on the layout. In the case of table layout, the position can be a whole row, col or cell. I would recommend using percentage values to set the width for cells, rows, and cols.
4. Apply all styles and keep fixing it until you get a similar result as required.
5. Finally, apply the nonessentials style such as access keys, default values, focus style for text files...etc.

Evaluation

This assessment is graded out of 20 points and will be evaluated using the following rubric.

Learners may receive partial scores or a zero for unacceptable work.

Marking Component	Out of	
Page layout is well structured and organized	3	
The right font applied to all page	2	
The right color for background and font applied	1	
The code compiles with no errors	2	
All page items are in the right position	3	
Page style with an external style sheet.	1	
Access keys are applied	4	
Default values are applied	4	
Required files are applied	4	
Text fields are validated	4	
Code comments are used and clear	2	
Bounce mark	Sum	30
Hover applied on the submit button	+1	
Pop up window applied	+1	
Label element applied to at least 3 elements	+1	
	Sum	33
	Total	30
	Final	20/20

■ Tips: tags and css properties you may need to use. Feel free to use any tag is not listed below:

Tags	Attributes	Value	CSS	CSS Values
<ul style="list-style-type: none">- from- input- button- hr- select- option- optgroup- textarea- label	<ul style="list-style-type: none">- type- name- checked- value- selected- placeholder- for- id- file- accept- required- novalidate- pattern- title- accesskey	<ul style="list-style-type: none">- radio- checkbox- text- button	<ul style="list-style-type: none">- :focus- :valid- :invalid- :required- Display	<ul style="list-style-type: none">- table- table-row- table-cell
